BLD25-3900	Application Accepted/In Review	Building Permit No Plan Check	7/1/2025		17132 Bodega Ln Bodega Bay [BBY]	<p>Project Description:</p> <p>This permit application is being submitted to regularize the unpermitted installation of a 250-gallon underground propane tank, which was professionally installed on April 28, 2025 by licensed technicians from McPhail Fuel Company. The tank was placed on the north side of the property, in the same location where an above-ground tank had previously been situated.</p> <p>A licensed plumber installed the associated gas line, which is currently pressurized and ready for county inspection. The permit application was discussed with Dan Patalano at the County prior to submission.</p> <p>Scope Includes:</p> <p>Installation of a 250-gallon underground propane tank by McPhail Fuel Company technicians.</p> <p>Installation of a gas line by a licensed plumber.</p> <p>Pressure test completed and system ready for inspection.</p> <p>All work completed in accordance with industry standards and safety codes.</p> <p>Purpose of Permit:</p> <p>This permit is requested after-the-fact to bring the installation into compliance. The owner was unaware that a permit was required for an underground propane tank installation and is now seeking to regularize the situation in coordination with the County.</p>	103-120-019	\$0.00	\$0.00	07/01/2025 - 07/31/2025

GRD25-0136	Awaiting Applicant Response	Grading Permit	7/24/2025		28165 Hwy 116 Monte Rio [MRO]	The proposed project consists of embankment repairs at at three identified bank failure locations along a streamside easement road that travels alongside Sheephouse Creek through the Keller property. The road provides primary year-round access to the Riciloi residence, and the Project is designed to enhance riparian habitat, reduce future sediment delivery, and restore and protect the structural integrity of stream banks where the unpaved access road is vulnerable to collapse along the left bank of Sheephouse Creek. The project proposes boulder-ballasted wood structures (logs and logs with rootwads) that will act as bank-stabilization, energy dissipation, and in-stream habitat features. This design will meet project objectives by improving shallow water habitat and increasing the availability of velocity refugia for aquatic organisms, stabilizing streambanks and preventing large loads of fine sediment from polluting the stream system, preserving the natural aesthetic and restoring important fluvial geomorphic processes of Sheephouse Creek, as well as protecting and rebuilding portions of the easement road using a “no net fill” approach to avoid increasing flood risk.	097-150-004	\$0.00	\$0.00	07/01/2025 - 07/31/2025

SEP25-0255	Ready for Plan Check	Septic Permit	7/31/2025		2585 Lawndale Rd Kenwood [KEN]	AllStarz Pumping & Engineering will be performing the decommissioning and proper abandonment of the existing septic system located at the above-referenced property. The following scope outlines the full procedure we will undertake to comply with county and environmental regulations: 1. Expose Existing Septic Tanks Our crew will excavate and fully expose all existing septic tanks on site using appropriate equipment. All necessary precautions will be taken to avoid disturbing any nearby utilities, structures, or vegetation. 2. Pumping and Cleaning (if necessary) If any sewage, sludge, or liquid remains in the tanks, we will arrange for a licensed septic pumper to remove and legally dispose of the contents at an approved facility. 3. Perforation of Tank Bottoms After the tanks are emptied, we will puncture holes in the bottom of each tank to ensure proper drainage and prevent future water accumulation. 4. Collapse of Tanks The tanks will then be crushed and collapsed in place to reduce the potential for future ground settling or void formation. 5. Fill With Clean Crushed Rock The interior of each collapsed tank will be filled with clean, drainable crushed rock to stabilize the structure and maintain subsurface drainage. 6. Backfill and Compaction The excavation area will then be backfilled with a mixture of compacted gravel and clean native soil (or imported fill, if needed). Material will be placed and compacted in lifts to minimize future settling. 7. Final Grading The area will be finish-graded to restore natural contours and to promote positive surface drainage away from all structures.	050-130-026	\$615.00	\$0.00	07/01/2025 - 07/31/2025
